fivestars*Add a star*

Description

This function creates an HTML tag with the appropriate number of stars, as well as an accessibility label.

Usage

```
fivestars(  
  rating,  
  label = round(rating, 1),  
  aria_label = paste("The rating is", round(rating, 1), "out of five stars"),  
  label_pos = "left",  
  star_size = NULL,  
  star_color = NULL,  
  star_background = NULL  
)
```

Arguments

rating	rating out of five
label	text to display in tag, defaults to the rating rounded to one decimal place
aria_label	accessibility label for text
label_pos	"left" or "right" - position of label relative to stars
star_size	CSS font-size for star background, default is to inherit from use_fivestars()
star_color	CSS colour for stars, default is to inherit from use_fivestars()
star_background	CSS colour for star background, default is to inherit from use_fivestars()

Value

an html tag that renders a star rating out of five

Examples

```
use_fivestars()  
fivestars(3.5)
```

use_fivestars	<i>Add stars CSS</i>
---------------	----------------------

Description

This function adds the appropriate CSS to your page for star ratings.

Usage

```
use_fivestars(  
    star_size = "larger",  
    star_color = "#fc0",  
    star_background = "#999"  
)
```

Arguments

star_size	CSS font size for your stars, default is "larger"
star_color	CSS colour for star, default is #fc0
star_background	CSS colour for star background, default is #999

Value

HTML that inserts CSS into the page head

Examples

```
use_fivestars()
```
